Hrs/Qty	Service	Rate/Price	Adjust	Sub Total
1	Electrical Fault Finding & Diagnostic Investigation Electrical Fault Finding & Diagnostic Investigation Attendance to investigate electrical issues reported at the property. Diagnostic testing and inspection carried out on the electrical installation. The following observations were identified during the inspection: • Consumer unit (fuse box) cover missing, resulting in accessible live parts and presenting a potential risk of electric shock. • Certain MCB circuits are not protected by an RCD, resulting in reduced additional protection against electric shock. • Socket outlet circuits are protected by a 16A MCB. This is inadequate for the connected load and causes nuisance tripping when multiple kitchen appliances are used simultaneously. • Further remedial works are recommended to bring the installation closer to current BS 7671 requirements and improve safety and functionality. Findings and recommendations have been provided to the client.	£110.00	0.00%	£110.00
